KUDELSKI GROUP LAUNCHES ITS NEW IoT
CHIP-TO-CLOUD SECURITY SUITE

CHESEAUX-SUR-LAUSANNE, Switzerland and PHOENIX (AZ), USA, November 14th, 2017 – The Kudelski Group (SIX:KUD.S), the world leader in digital security, today announced the expansion of its Internet of Things (IoT) security Center of Excellence with the launch of its IoT Security Suite. The Suite targets device manufacturers and service providers who need to address the long-term privacy and safety issues of their devices and protect their business models from attack.

The comprehensive IoT security solution builds on 25 years of Kudelski Group innovation in protecting digital TV content on more than 500 million devices, as well as its strong expertise in cybersecurity. It provides the ability to ensure network and device integrity as well as control access to business-critical data coming from IoT devices, thereby enabling and protecting new IoT business models, both at launch and when the system comes under attack.

The Suite provides a flexible, modular approach to device, data and local/edge decision-making protection by offering a choice of dedicated hardware security chips, embedded IP blocks and/or advanced software protection techniques. This offers a customized level of security depending on the threat model agreed with the customer.

The first release of the IoT Security Suite contains a dedicated secure element designed to resist the highest level of attacks even when operating in IoT battery-powered devices. The secure element comes provisioned with credentials that are authenticated directly by the Kudelski Group's cloud-based servers using techniques proven in the competitive pay-TV space and guaranteeing the identity and authenticity of devices embedding the chip.

"The IoT attack surface is huge and growing every day, made up of a vast ecosystem of devices and technologies, different communication protocols, platforms, applications and infrastructures," said Jean-Michel Puiatti, Senior Vice President IoT Security at Kudelski Group. "We are offering foundational security technologies and services that give our customers a strategic competitive advantage. By assessing, implementing, evolving and monitoring the security of their devices over time, we protect their business against new threats."
